EVERGREENS **

American Red Pine (*Pinus resinosa*) (Native) (New)

Also known as Norway Pine. Excellent timber tree. Height to 75 feet with a spread of 15 to 20 feet. Needles are medium to dark green and soft. Bark is reddish-brown. Ordinary to poor soil. Can withstand dry, windy, rocky conditions. Good for naturalizing and as a screen or windbreak.

4 Yr 12-15 Inches...25 Per Bundle

Douglas Fir (*Pseudotsuga menziesii glauca*)

Highly resistant to Gypsy Moth. Fast growing; grows to 60 feet. Short, soft blue-green needles. Grows best in moist, well drained soil. Large timber producing tree.

4 Yr 7-14 Inches...25 Per Bundle

Eastern Red Cedar (*Juniperus virginiana*) (Native)

Hardy and easy to transplant, this tree is one you can plant and forget about. Adapts to a variety of soil conditions. Needs full sun. Medium growth and matures at 40 to 50 feet. Spreads 8 to 20 feet at maturity.

2 Yr 6-8 Inches...25 Per Bundle

Fraser Fir (*Abies fraseri*)

Medium growth to 60 feet. Spread 20 to 30 feet. Soft, shiny, dark green foliage is silver on the underside. Likes cool, moist, well drained soil. Does not require full sun. Needs only light shearing. Good needle retention.

2 Yr 1-3 Inches...25 Per Bundle

Norway Spruce (*Picea abies*)

Fast growth to 75 feet. Spread 25 to 30 feet. Dense, dark green needles never get longer than 1 inch. Likes full sun. Thrives well in average soil conditions, but prefers moisture in the soil to maintain its deep green color. One of the best conifers for shelters and windbreaks.

4 Yr 7-14 Inches...25 Per Bundle

Eastern White Pine (*Pinus strobus*) (Native)

Fast growing to 100 feet. Spread 20 to 40 feet. A five needled pine, with soft, light green-blue needles. Likes full sun. Can tolerate dry, rocky soil. Grows in normal moisture conditions but can tolerate wet, swampy areas.

4 Yr 8-16 Inches...25 Per Bundle

GROUNDCOVER

Blue Rug Juniper (*Juniperus horizontalis*) (New)

Grows to a spread of 6-8 feet or more and 4-6 inches in height.

Sold Individually in Plastic Pots

Northumberland County Conservation District

**Sizes of items listed are not guaranteed. Sizes may differ based on nursery availability.

DECIDUOUS

Red Oak (*Quercus rubra*) (Native)

Grows in a rounded shape; offers great shade due to a dense crown. Fast-growing in a variety of soils and likes full sun. Provides great fall color, with leaves turning russet-red to bright red. Acorns from this tree are a high food preference for wildlife. Grows 60' to 75', with a 45' spread.

2 Yr 8-18 Inches...Available in 5 or 10 Per Bundle

Wild Black Cherry (*Prunus serotina*) (Native) (New)

Grows to 60 feet. Grows best in rich, deep, moist soil. It has been highly prized in furniture making since colonial times and is an excellent firewood. Fruit provides food for many small animals.

3 Yr 12-36 Inches...Available in 5 or 10 Per Bundle

Chinese Chestnut (*Castanea mollissima*) (New)

Growth to 20 to 25 feet. Leaves turn yellow to bronze in fall. Grows best in full sun; deep, sandy loam. These dense and round headed ornamental trees bear large, sweet, delicious edible nuts. Although self fertile, it is best to plant two or more for best pollination. Blight resistant.

3 Yr 24-30 Inches...Available in 5 or 10 Per Bundle

Pin Oak (*Quercus palustris*) (Native) (New)

Native tree with fast growth to 75 feet in good soil. Spread 25 to 40 feet. Acorns are good wildlife food. Makes an excellent specimen as a lawn tree. Unique branching pattern. Will tolerate wet soil, but prefers moist, rich, acidic, well-drained soil.

4 Yr 8-12 Inches...Available in 5 or 10 Per Bundle

Sargent Crabapple (*Malus sargentii*)

Compact landscape tree, has abundant clusters of fragrant white flowers making their appearance in May. Its dense, spreading crown and zigzagging branches add to the appeal, often making the tree wider than it is tall. Because of its size, this tree is useful for planting under utility lines, in confined yards, as privacy screens and hedges and on sloping ground. Grows at a slow rate to a height of 6'-10', spreads of 6'-12'. Prefers full sun and grows in all textures of soil. Prefers moist, well-drained soil.

3 Yr 12-24 Inches...Available in 5 or 10 Per Bundle

Red Buckeye (*Aesculus pavia*) (New)

A small tree growing 10 to 20 feet in height and a spread of 12 to 15 feet. Produces abundant, hard, shiny, orange-brown inedible nuts. Does well in all soils, but grows best in average, moist, acidic in full sun to partial shade.

2 Yr 6-8 Inches...Available in 5 or 10 Per Bundle

PICTURES - DECIDUOUS

Chinese Dogwood

Red Maple

PICTURES - ORNAMENTALS

Streamco Willow

Chokecherry

Shamrock Inkberry Holly

DECIDUOUS**Sycamore (*Platanus occidentalis*) (Native)**

Very popular for residential landscaping because of its nice growth and thick canopy which provides tons of shade. Large green leaves turn gold in the fall. Has medium-weight wood that is sturdy and durable, but also easily worked. Grows 70'; 50' spread. Needs full or partial sun and grows at a moderate rate, adaptable to most soils.

2 Yr 15-30 Inches...Available in 5 or 10 Per Bundle

Red Bud (*Cercis canadensis*) (Native)

Known as the harbinger of spring, the eastern redbud's delicate blossoms and buds are one of the season's most dramatic displays. Even in winter, covered with snow, the redbud is stunning. Grows to 20-30' with 25'-35' spread. Grow in full sun or partial shade and various soils.

2 Yr. 6-12 Inches...Available in 5 or 10 Per Bundle

Chinese Dogwood (*Cornus kousa*) (New)

Height 20 to 30 feet. White flowers in clusters, mid-June, after White Dogwood is finished blooming. This variety has proven to be resistant to the blight which has infected many dogwoods in the Northeast.

3 Yr. 24-30 Inches...Available in 5 or 10 Per Bundle

Red Maple (*Acer rubrum*) (Native) (New)

Also known as Scarlet or Swamp Maple. Growth 40 to 60 feet. Highly prized because of its bright red flowers in early spring before leaves appear. Medium to dark green leaves turn yellow to brilliant red in fall. An excellent wetland species; can tolerate wet, swampy soil conditions. Relatively fast growing.

4 Yr. 24-30 Inches...Available in 5 or 10 Per Bundle

Q & A: What does "Native" mean and why is it important?

A native plant is one that occurs naturally in a particular region, state, ecosystem, and habitat. Natives offer many of the benefits of exotic cultivars without the exhaustive requirements. There are approximately 2,100 native plants in Pennsylvania. By establishing native plants in your yard, you will decrease water dependence, reduce the need for fertilizer and pest control, and create a renewed sense of place for birds, other wildlife, and you.

For more information on Native Plants, please visit the website for the Department of Conservation and Natural Resources at <https://www.dcnr.pa.gov/Conservation/WildPlants/LandscapingwithNativePlants/Pages/default.aspx>.

ORNAMENTAL TREES AND SHRUBS

Streamco Willow (*Salix purpurea*) (New)

Very fast growing. Should reach 12 to 15 feet in height. Narrow, lustrous dark blue-green leaves with light gray or olive-gray stems. Prefers cleared, moist soil along stream banks. Disease and insect resistant.

2 Yr. Transplants; 1 Foot Cut Back...Sold Individually

Chokecherry (*Prunus virginiana*) (Native) (New)

Fast growing. Can grow 20 to 30 feet in height with a spread of 18 to 25 feet. It is a small suckering tree or large shrub with crooked branches and slender twigs forming an oval rounded crown. Fruit is red. Good for making jams and jellies. Provides food and shelter for wildlife.

3 Yr. 24-30 Inches...Sold Individually

Shamrock Inkberry Holly (*Ilex glabra*) (Native) (New)

A compact, evergreen shrub growing to a height of 3 to 5 feet with comparable spread. Bright, glistening green new growth matures to lustrous dark green. Partial to full sun. Prefers most well-drained soil. Displays an abundance of dark purple to black berries through winter. Deer resistant. Useful as accent plant, low hedges or foundation planting.

Sold Individually in Plastic Pots

Volunteers and NCCD employees preparing trees during our 2018 sale.

SPRING FLOWERS FOR CONSERVATION BEAUTIFICATION

Hosta - Variegated *(New)* (Perennial)

Shade lilies, variegated foliage with bell-shaped flowers on graceful stalks. Late summer bloom, foliage in spring. 18-32" in partial shade.

Bulbs...Available individually or in 10 Packs

Stargazer Lilies *(New)* (Perennial)

Strikingly beautiful blooms of fuchsia color, dramatic shape and pleasing fragrance. Hardy growth, excellent cut flowers. July-September bloom. 25-30" tall in full sun.

Bulbs...Available individually or in 10 Packs

Blazing Star (Perennial)

Attractive rosy purple spikes. The stems are covered with a grass-like foliage of dark green. Grows well in poor soil. A very desirable plant for tall borders. Blooms August - September. Height 3" to 4" in sun or shade.

Bulbs...Available individually or in 10 Packs

Peacock Orchids *(New)* (Annual)

Hold on to summer with this sweet-scented late bloomer. Elegant, creamy-white 4" flowers accented with prominent purple centers atop sturdy stems. Blooms July-October. Height 24" to 36" in full sun. Flowers will not be eaten by deer.

Bulbs...Available individually or in 10 Packs

Four O'Clock (Mixed Colors) *(New)* (Perennial)

Afternoon opening blooms in a wide range of vivid colors. The trumpet-shaped flowers emit a pleasant subtle vanilla fragrance that hummingbirds and butterflies adore. Blooms mid-summer until frost. Height 36"-48" tall in full sun. Flowers will not be eaten by deer.

Bulbs...Available individually or in 10 Packs

"The earth laughs in flowers."
-Ralph Waldo Emerson

Northumberland County Conservation District

SPRING FLOWERS FOR CONSERVATION BEAUTIFICATION

Daylily Stella D'Oro (Perennial)

Dwarf variety produces an abundance of golden-yellow bell shaped flowers with dark green foliage. Earliest, longest-blooming of all daylilies. Blooms all summer long. Height 18 inches tall in full sun.

Bulbs...Available individually or in 10 Packs

Tiger Lilies (Perennial)

Exotic beauties of rich colors with curled and delicately dotted petals of red, white, yellow or pink. Vigorous growth of 15 to 20 flowers on each stem. Blooms July to September. Height 3 to 4 feet tall in direct sun.

Bulbs...Available individually or in 10 Packs

Bleeding Heart (Perennial)

A favorite in perennial gardens. These plants, with their heart-shaped pink or white blooms, have captured the love of so many gardeners. Blooms July to October. Height 24 to 36 inches in partial shade.

Bulbs...Available individually or in 10 Packs

Freesia Mix (Annual)

You'll love the multi-hued flowers of this Freesia Mix. They add tons of cheerful color and beauty to any landscape. These are fragrant and easy to grow in various soils. Blooms June to July. Height 12" to 18" in full sun.

Bulbs...Available individually or in 10 Packs

Lavender Astilbe (New) (Perennial)

Long blooming plumes of rich, delicate feathery flowers adorned by attractive foliage. An easy to grow, very dependable performer. Height 18" to 24" in partial sun or shade. Deer will not eat.

Bulbs...Available individually or in 10 Packs

***Important note: The trees you are buying are bare-root trees. They will look similar to the picture on the right when you pick them up.**

The benefits of bare-root trees (from www.arboday.org): As their abundant, fibrous roots aren't confined by a container, bare-root trees get off to a more vigorous start compared to containerized roots which typically need more time to adjust to transplanting. Bare-root trees typically surpass the size of larger containerized trees in only a few years.

Check pages 18-23 for pictures!

*Mark your calendar...
March 18th is the deadline to order...
April 24th and 25th are the pickup dates!!*

Some Fun Tree Facts! (from arboday.org)

- Trees remove pollution from the atmosphere, improving air quality and human health.
- One large tree can provide a day's supply of oxygen for up to four people.
- Forested watersheds provide quality drinking water to more than 180 million Americans.

SMALL FRUIT TREES

Blueberry, Herbert *(New)*

Perfectly sweet with a tart blueberry zing. Cold-hardy. Fruit holds well and grows in large, light blue clusters. Late-blooming to avoid frost zaps. One of the finest cultivated blueberries. Fruit size is large with a sweet, mild, juicy taste. Has a firm texture. Takes 2-3 years to bear.

Bare Root (2 to 3 years, 12 to 18 inches)...Sold Individually

Raspberry, Red Latham *(New)*

Firm berries provide durability during harvest. Fruit is outstanding for fresh-eating, freezing, and canning. Cold-hardy. Ripens in mid-July. Self-pollinating. Fruit size is large and has a sweet, good flavored taste. Takes 1-2 years to bear. Do not plant within 75-100 feet of black raspberries.

Bare Root...Sold Individually

Strawberries, Earliglow *(New)* (early season)

One of the best-tasting strawberries. Will give you an abundance of large, jewel-like, dark red berries. Cold hardy. Ripens in June. Self-pollinating. Produces large berries that are firm. Takes 1-2 years to bear.

Bare Root...25 Per Bundle

Strawberries, Honeoye *(New)* (mid-season)

Winter-hardy, has an optimum flavor and excellent freezing quality. The berry size is large, bears in June after one year of planting. Self-pollinating.

Bare Root...25 Per Bundle

Strawberries, Cabot *(New)* (mid-late season)

Easy-to-grow, yields rich, large, red berries. Disease-resistant to red stele and cold hardy. Self-pollinating. Ripens in June. Takes 1-2 years to bear.

Bare Root...25 Per Bundle

Strawberries, Tristar *(New)* (everbearing)

Loved by chefs for their sweet flavor. Disease resistant. Cold-hardy and self-pollinating. Ripens in Spring, Summer and Fall. Takes 1 year to bear.

Bare Root...25 Per Bundle

One cup of strawberries contains over 100 milligrams of vitamin C!

*Spotted Lanternfly Alert

On September 22, 2014, the Pennsylvania Department of Agriculture, in cooperation with the Pennsylvania Game Commission, confirmed the presence of the Spotted Lanternfly (*Lycorma delicatula*, (WHITE)) in Berks County, Pennsylvania, the first detection of this non-native species in the United States. There is currently a quarantine in place in the following counties: Berks, Bucks, Carbon, Chester, Delaware, Lancaster, Lebanon, Lehigh, Monroe, Montgomery, Northampton, Philadelphia, and Schuylkill.

In the Spring, beginning in late April to mid-May, search for the nymphs on smaller plants and vines, and any new growth on trees and shrubs. Fruit trees and grapes may be more susceptible to damage and mortality when larger populations of Lanternflies are found nearby.

As the year progresses third and fourth instar nymphs and adults will migrate to Tree of Heaven, as a primary host, and may be seen feeding on the trunk and branches of the tree. Trees can be afflicted with weeping wounds of sap on the trunks, with heavy populations causing honey dew secretions to build up at the base of the tree, blackening the base of the tree and surrounding soil around the base with sooty mold fungal growth. Increased activity of wasps, hornets, bees, and ants can be seen feeding on honeydew secretions and at tree wounds. In large population areas, adults will also be seen feeding on other trees in the surrounding area, including willows, maples, poplars, tulip poplars, birch, ash, and others.

The Spotted Lanternfly begins laying eggs in masses of 30 to 50 eggs, covered in a brown, mud-like substance, in late September or early October. Egg masses may be found on adult host trees, especially Tree of Heaven (*Ailanthus altissima*), moderately-sized stones and other smooth surfaced outdoor items, such as lawn furniture, stone and brick work, and outdoor recreational vehicles. The egg mass poses, perhaps, the greatest risk for accidental transport of the Spotted Lanternfly to new areas.

We are encouraging all landowners (especially tree owners) to take proactive steps to limit the spread of Spotted Lanternfly. Please visit agriculture.pa.gov and click on the link "Spotted Lanternfly" under "Hot Topics" to find out what steps should be taken if you locate this pest. You can also call 1-888-422-3359 to report Spotted Lanternfly.

* Information taken from http://www.agriculture.pa.gov/Plants_Land_Water/PlantIndustry/Entomology/spotted_lanternfly/program-information/Pages/default.aspx.

FRUIT TREES

IMPORTANT NOTE: For apple trees, cross pollination between 2 different varieties is always needed to produce an adequate fruit crop. Therefore, planting one Rubymac™ and one Redcort will produce a good fruit crop, while planting 2 of either variety alone will produce little fruit. The same applies to pear trees.

All Fruit Trees: Bare Root, 4 to 6 Feet Tall...Sold Individually

Apple, Rubymac™, Dwarf (New)

A true McIntosh that colors early and hangs well on the tree. Fruit develops a solid-red blush with minimal striping. Ripens in mid to late September. Fruit size is medium, tastes sweet to subacid, aromatic and juicy with a crisp texture. Great for eating or sauce. Takes 2-5 years to bear fruit.

Apple, Honeycrisp™, Dwarf (New)

Outstanding fresh-eating qualities make this variety an American favorite. Fruit is aromatic and sweet as honey with an explosively juicy, crisp texture. Cold-hardy. Ripens in early September. Fruit size is large. Takes 2-5 years to bear fruit. Great for eating, baking, and sauce.

Apple, Redcort, Dwarf (New)

Redcort is a variety of Cortland, with heavy red streaking over yellow-green skin. It is a large, oblate apple with crisp and juicy white flesh. Its flavor is more tart than sweet, and it is an outstanding all-purpose apple. Ripens in early to mid-September.

Nectarine, Sunglo (New)

The "queen" of the nectarines is hardy and productive, yielding yellow-fleshed fruit up to 3". You can freeze or can them, or eat them fresh. An excellent choice for first-time fruit growers. Freestone. Ripens in early August. Self-pollinating. Fruit size is large and has a sweet and juicy texture. Takes 2-4 years for fruit to bear.

Peach, Bounty (New)

This non-browning heirloom beauty is a fine canning and freezing peach, with excellent flavor and texture. Its natural sweetness and juiciness bring back such fond memories of the way peaches used to taste. The vigorous tree produces great big yellow-fleshed fruits, which are easy to peel and pit. Resistant to bacterial leaf spot and more winter-hardy. Freestone. Ripens in early August. Self-pollinating, but yields bigger crops when planted near a different peach with a similar bloom time. Fruit size is medium to large and is firm. Takes 2-4 years for fruit to bear.

For detailed information on how to plant fruit trees, please visit <https://www.starkbros.com/growing-guide/article/fruit-tree-care-planning-planting>.

FRUIT TREES

Peach, Glohaven (New)

A wonderful dessert peach that's resistant to browning. Large fruit has a flavorful yellow flesh and is excellent for canning because of its fuzzless and non-browning nature. Resistant to bacterial spot. Freestone. Ripens in mid-August. Self-pollinating, but yields bigger crops when planted near a different peach variety with a similar bloom time. 2-4 years to bear.

Pear, Bartlett, Dwarf (New)

This multi-purpose pear is a long-standing favorite of orchard growers and fruit gardeners alike. Fruit features a smooth, firm texture and a juicy, spicy taste. Harvest in late August. Fruit size is large. Needs a pollinator. Takes 4-6 years to bear fruit.

Pear, D'Anjou, Dwarf (New)

Cold-hardy and vigorous. Bright green and very firm at harvest, with a tinge of yellow as it ripens. Harvest in late September. Needs a pollinator. Fruit is large, sweet and juicy. Takes 4-6 years to bear fruit.

SMALL FRUIT TREES

IMPORTANT NOTE: For blueberries, fruit set and crop size are improved by cross pollination. Plant two different varieties for best results.

Blueberry, Patriot (New)

Outstanding flavor fresh, baked, and in preserves. Disease-resistant to root rot and cold-hardy. Ripens in June. Fruit size is large with a sweet and mild taste. Takes 2-3 years to bear.

Bare Root (2 to 3 years, 12 to 18 inches)...Sold Individually

"If only one out of ten United States Citizens planted just two fruiting trees, the world would be richer by nearly 6 billion pounds of fruit."
